Refurbished  
**RL5114**

One of our most customizable machines yet, the Triton RL5000 will change the way you think about ATMs. With a stunning 10.4-inch screen, the RL5000 allows for a remarkable array of colorful, branded content. Logos, photos, and custom graphics of all kinds are quickly and easily integrated, using the simple-to-operate PC-based interface. At the heart of this almost endlessly configurable system is the userfriendly Microsoft® Windows® CE 5.0 operating system, built on Triton's X2 technology and a 32-bit processor. Powered by Triton Dynamic Language (TDL), our ATMs communicate with the host via a protocol widely accepted as the de facto industry standard. Certified by virtually every processor, the TDL platform is the backbone which supports faster processing, feature rich software functionality such as Remote Key Transport (RKT), and smart controls that allow interactive customization via text rather than static screens.

The machine's sleek profile helps the RL5000 sit attractively in any location, from C-store to bar to hotel lobby. The incredibly sturdy and durable construction, and a range of high-precision vault and lock options combine to make the RL5000 secure in any setting. Likewise, multiple dispenser choices are available to match the traffic of your location.

The Triton RL5000. It's endless customization, for an endless supply of user options.

**Manufactured and supported in the USA.**

And because it's a Triton, you know it's reliable, easy to service and maintain, and fully compliant. The Triton RL5000: Perfectly suited for any location.
